Abhijith P.R

Golang Backend developer

+91 8590988810 | abhijithpr366@gmail.com | LinkedIn | GitHub

Summary

Golang backend developer with one year of internship experience at Bridgeon Solutions, working in an agile team with sprint planning, stand-ups and code reviews. Designs and builds secure REST and gRPC APIs using clean architecture, with JWT authentication and role-based access control. Experienced in event-driven systems with Kafka, PostgreSQL and Redis, and in deploying services with Docker, CI/CD and AWS. Takes features from database design to production, and works across the stack with React.

Skills

- **Programming:** Golang, JavaScript, SQL
- **Backend:** Fiber, Gin, REST APIs, gRPC, WebSocket
- **Databases:** PostgreSQL, Redis, GORM, sqlc
- **Security:** JWT, RBAC, Middleware, OTP Authentication
- **Architecture:** Clean Architecture, Modular Monolith , Microservices, Event-Driven Systems, Kafka
- **Cloud & DevOps:** AWS (EC2, S3), Docker, CI/CD
- **Tools:** Git, GitHub, Postman, Apidog
- **Integrations:** Razorpay, Cloudinary, SendGrid
- **Familiar With:** Kubernetes
- **Frontend:** React, HTML, CSS, Responsive Design

Projects

LendoGo – Full Stack Loan Application & Management Platform *May 2026 – June 2026*

Golang | React | Fiber | PostgreSQL | Kafka | Redis | WebSocket | AWS EC2 | S3 | Cloudinary | Razorpay

- Built a full-stack fintech platform from the ground up: a React frontend with role-based dashboards for borrowers, lenders, admins, and support staff, backed by a Golang modular monolith following clean architecture principles for maintainability and separation of concerns.
- Designed a normalized PostgreSQL schema to manage the complete loan life-cycle — application, KYC verification, disbursement, repayment, and audit trails — with strategic indexing for fast queries as data volume grows.
- Secured the platform end-to-end with JWT-based authentication and role-based access control (RBAC), using Redis-backed OTP caching for fast, reliable user verification during onboarding and transactions.
- Built a complete loan engine covering eligibility checks, an EMI calculator, Razorpay payment integration, and automated approval workflows, with due-date cron jobs and Kafka-driven event notifications for disbursement and payment updates.
- Added real-time WebSocket chat between borrowers and lenders, plus an admin dashboard with feature toggles for platform control; deployed the full stack on AWS EC2 using Docker and CI/CD, with S3 for document storage and Cloudinary for optimized image delivery.

MoneyMate – UPI-Based Money Management Platform (Team Project) *July 2026 - Aug 2026*

Flutter | Golang | Microservices | gRPC | REST | Docker | CI/CD | Render | SendGrid | Apidog | sqlc

- Built a UPI-based money management platform as a team, with a Flutter mobile app for end users, an admin panel for oversight, and a merchant web portal, supporting P2P and person-to-merchant transactions.
- Architected the backend in Go as independent microservices sharing a common database, using gRPC for internal service communication and REST for external-facing APIs.
- Used sqlc to generate type-safe, compile-time-checked Go code from SQL queries, and integrated the go-qrcode package for QR-based payment generation.
- Documented and tested all API contracts with Apidog to keep service boundaries clear and streamline collaboration across the microservice codebase.
- Containerized every service with Docker and deployed via CI/CD pipelines on AWS EC2 with S3 storage, integrating SendGrid for transactional email delivery.

Education

Diploma in Computer Engineering 2025

Government Polytechnic College Pala GPA: 7.28 / 10
